This book draws together a large quantity of research that has been carried out on pulverised fuel ash (PFA) over the past 30 years. PFA/fly ash is produced as a by-product from burning coal and has many uses within the construction industry, such as in concrete, land reclamation, bricks and blocks, and grouting voids in the ground. In addition to covering the potential uses of PFA this book provides an overview of the benefits of its use.

 Includes: South Africa, Rhodesia, Zambia, Malawi, South-West Africa, Mocambique, Angola, Swaziland, Botsawana and Lesotho.

Thomas Telford

This volume presents selected papers presented during the 4th International Conference on Transportation Geotechnics. The papers address the geotechnical challenges in design, construction, maintenance, monitoring, and upgrading of roads, railways, airfields, and harbor facilities and other ground transportation infrastructure with the goal of providing safe, economic, environmental, reliable and sustainable infrastructures. This volume will be of interest to postgraduate students, academics, researchers, and consultants working in the field of civil and transport infrastructure.

This book is an essential guide to all facets of asphalt technology as applied to the construction and maintenance of highways and reflects the very best of UK asphalt and pavement technology. Written by an international team of leading experts, it covers all

aspects of fully flexible road construction from foundation design through to surface treatment. In recent years, asphalt technology has made significant advances, and this comprehensive work on the subject will be welcome to all in his field. Asphalts in Road Construction details all the major recent innovations but does so without neglecting the fundamental elements of the subject. The book also covers new materials such as stone mastic asphalt and thin surfacings, as well as environmental issues such as spray and noise reduction.

Every year more than 30 million tonnes of bituminous mixtures are laid in the UK in the course of maintenance and improvements of the road network. However, much of the technology associated with road construction and maintenance has never been published - until now. Bituminous mixtures in road construction has been published as the definitive guide to blacktop and addresses the theoretical and practical aspects of the design, manufacture and laying of bituminous mixtures. Written by a team of leading experts, the book provides up-to-

the-minute thinking in materials specification, test methods and harmonisation of standards and covers all aspects of fully flexible road construction from foundation design through to surface treatment. In one handy volume, Bituminous mixtures in road construction presents the best of British expertise and will prove to be an essential guide for all engineers working on the construction and maintenance of highways.

*Construction Methods and Equipment* Ihs Global Incorporated  
 Volume 2 of the Handbook covers the geotechnical procedures used in manufacturing anchors and piles as well as for improving or underpinning foundations, securing existing constructions, controlling ground water, excavating rocks and earth works. It also treats such specialist areas as the use of geotextiles and seeding.
